New Generation of Cranes

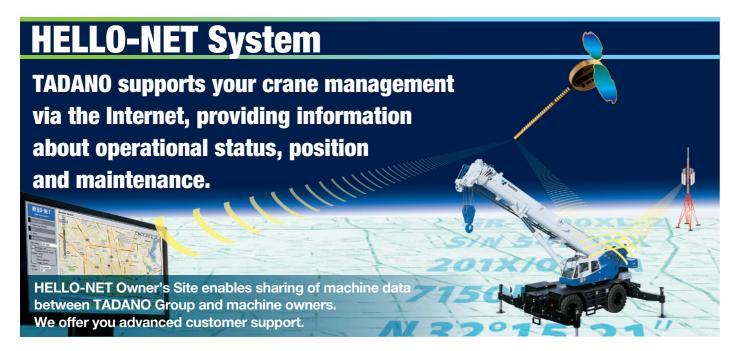

Our cranes can help you explore your future. At Tadano we are concerned about our environment.

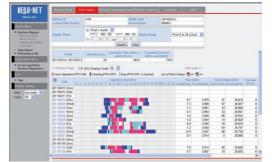

Improving our cranes operations and specifications to meet this goal is important to us.

However user friendliness, operator comfort, safety and customer support are also part of our essential goals.

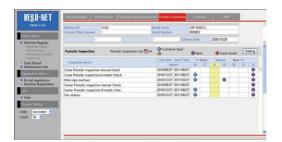

To this end Tadano has launched a new generation of crane that is friendly to the environment, our earth and our future.

NEW FEATURES

Monitoring machine information from your computer

1. Work History

HELLO-NET Owner's Site displays the day-to-day operational status, mileage and remaining fuel for each machine equipped with a communication terminal. In addition, you can view a list displaying the number of hours of operation and the mileage of all your machines for any specified month.

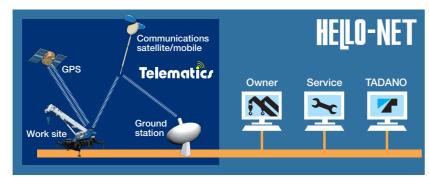

2. Machine Position Data

Using HELLO-NET Owner's Site, you can check a machine's latest position (up until the previous day) on a map. Two types of position data, listed below, are transmitted automatically from your machine once every day. Work Site: The location where the machine's PTO has been activated (for one hour or more). Position at Day's End: The final location from which GPS was able to receive data on a given day.

3. Maintenance Information

You can check the maintenance timetable of your machines for periodical replacement parts and inspection schedule.

HELLO-NET supports the maintenance of your machine.

Telematics (machine data logging and monitoring system) with HELLO-NET via internet (*availability depends on the situation). DETAILS: The availability of data communication systems, such as satellite or mobile communications which serve to

widen the service area differs according to individual countries. Besides, there are some countries where the system itself is not in use yet. For details, please contact your distributor or our sales staff in charge.

Introducing Fuel Monitoring System

The Fuel Monitoring System, displayed on the AML-C screen, monitors fuel consumption rates during crane operations, idling, and while traveling, allowing the operator to optimize fuel efficiency, reduce CO₂ emissions and noise level.

Two devices reduce fuel consumption

TADANO aims to reduce fuel consumption by its two newly developed technologies, the Eco Mode System and the Positive Control System. Consideration was given to the length of actual operating hours as well as non-operating time (when the crane is in a state of idling). In this relation, the average ratio between the operating hours and the non-operating time is 40/60% according to the results of our investigation. This understanding

helped us to successfully achieve our objectives.

Ratio Operating Nonoperating **60**%

Eco Mode System - reduces fuel consumption by approximately 40% while the crane is being operated.

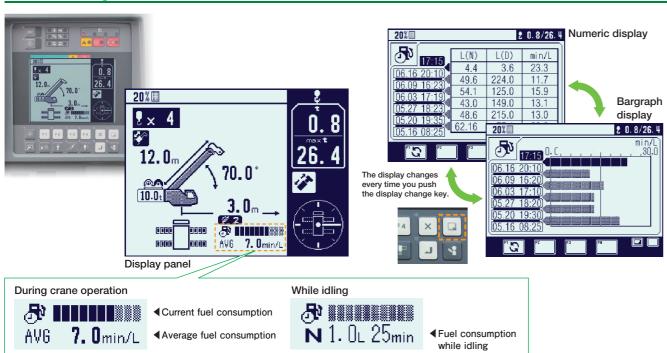

Positive Control System - reduces fuel consumption by approximately 60% when the crane is in a state of idling.

Fuel Monitoring System

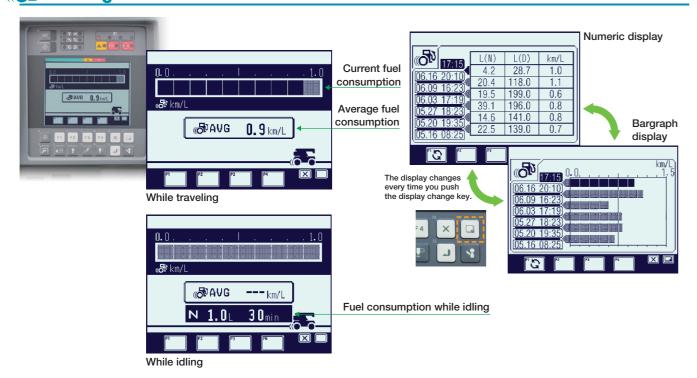

The Fuel Monitoring System constantly monitors fuel consumption on the AML screen.

Checking this monitor enables you to prevent wasteful fuel consumption from unnecessary acceleration and idling.

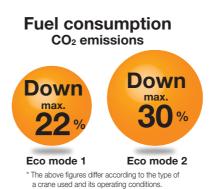

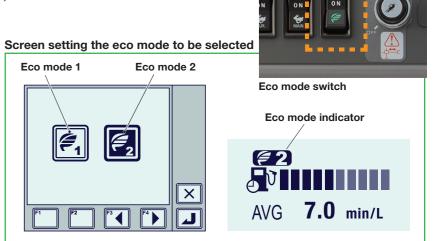

Driving

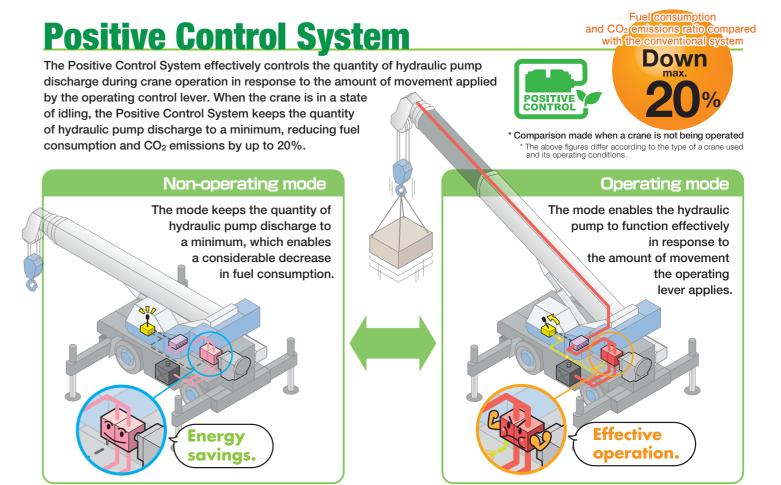

Eco Mode System

The Eco Mode System controls the maximum engine speed at the time of crane operation. To prevent an unnecessary rise in engine speed when there is excessive acceleration, the system enables fuel consumption and CO₂ emissions to decrease by Max. 22% with Eco mode 1, and Max. 30% with Eco mode 2, and the noise level is reduced.

Assist cylinder for jib

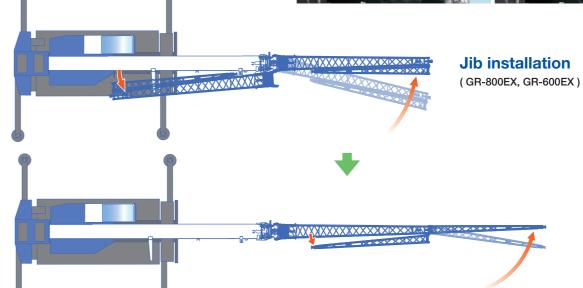

(GR-800EX, GR-600EX)

When mounting and stowing the jib, the assist hydraulic cylinders are used resulting in increased work efficiency and safety.

Two telescoping modes I & II

(GR-800EX, GR-600EX)

The operator has enhanced capabilities with two boom telescoping options whichever suits the lift needs.

Mode I

Mode I is extension of 2nd section only. Then follows the synchronized extension of 3rd, 4th and 5th sections.

Mode **I**

Mode ${\rm 1\!\!I}$ is synchronized extension of 3rd, 4th and 5th sections.

Then 2nd section extends independently.

New crane structure (GR-800EX, GR-600EX)

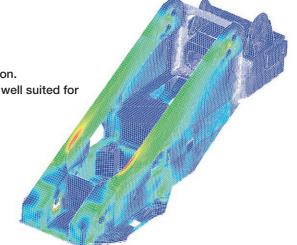

During development of the structural shape of the crane,

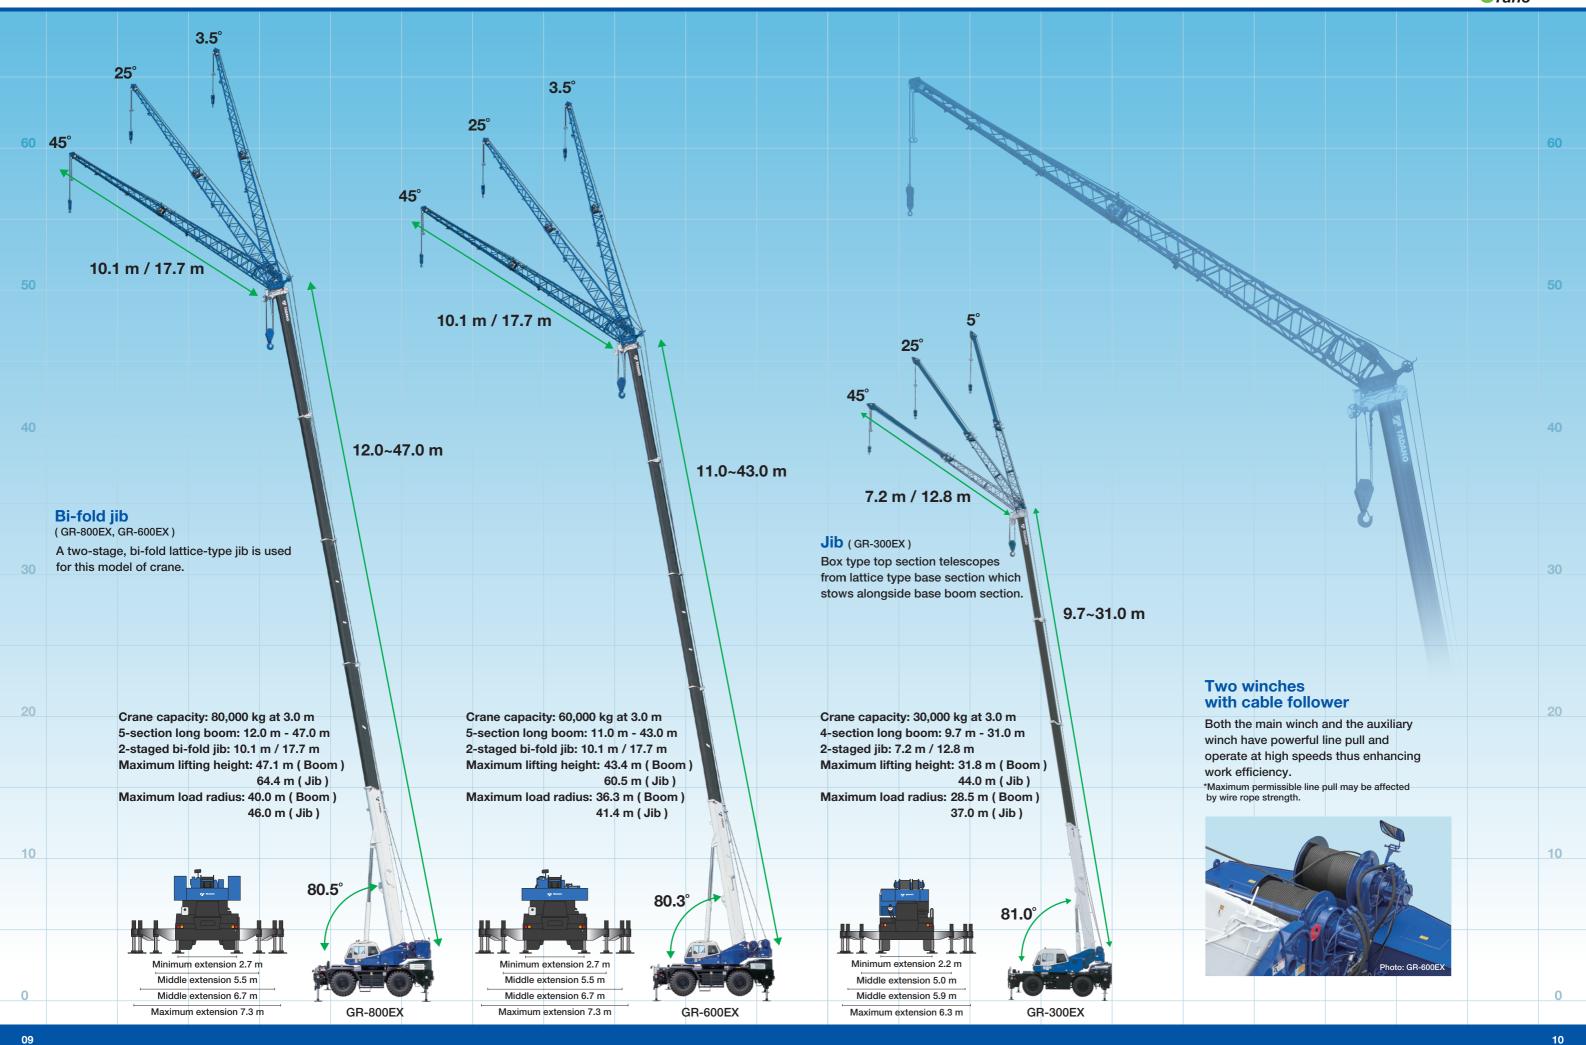

*FEM analysis was applied to achieve a design tailored for optimal operation.

The slewing frames' structure ensures a highly rigid, compact style that is well suited for the overall planned design of the crane.

Continuing the TADANO tradition of excellence and innovation.

*FEM: Finite Element Method

Load moment indicator [AML-C]

Tadano's AML-C is easy to use, innovative in design, displays important information to the operator and enables the operator to preset a custom working environment. For example, the AML-C shows the boom angle, boom length, load radius, operating pressure of the elevating cylinder, the extension width of the outriggers, slewing position, rated lifting capacity and present hook load. These features allow the AML-C to move seamlessly through all lifting operations without having to change configurations or input new codes to make the lift.

The AML-C safety features provide both audible and visual warnings. When an operation approaches the load limit Tadano's slow stop function engages to avoid shock loads.

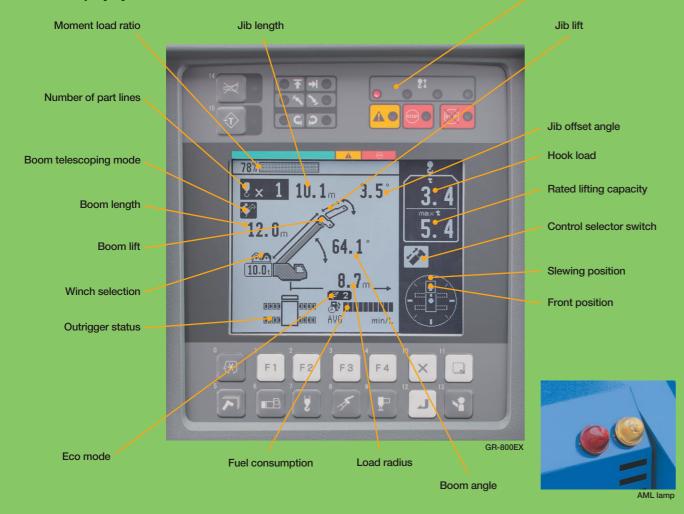

Drum rotation indicator

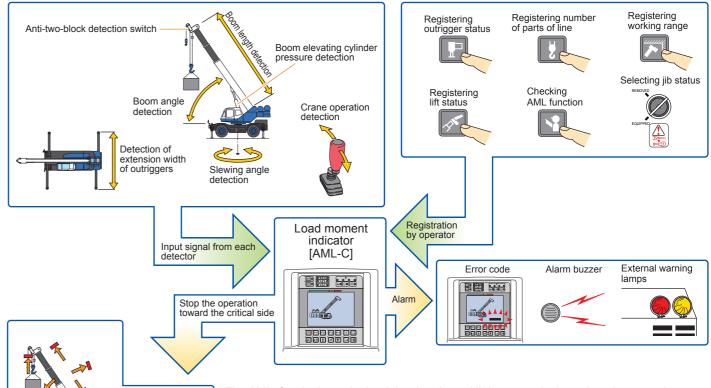

To let the operator know when the winch is rotating, the drum rotation indicator on the AML beeps and flashes sequentially.

The moving distance of the hook block per one flash of the indicator is approximately 7.9 in. to 11.8 in. (20 cm to 30 cm).

AML display symbols

The AML-C calculates the hook load and rated lifting capacity based on the operation state registered by the operator and input signal from each detector, and displays them as a moment load ratio. When the moment load ratio reaches or exceeds 100%, the AML-C stops the crane operations toward the critical sides and warns with error codes and a buzzer. (The AML-C is a safety device that aids the operator in preventing accidents, such as machine overturn, and damage resulting from overload.)

Outrigger asymmetric extension width control

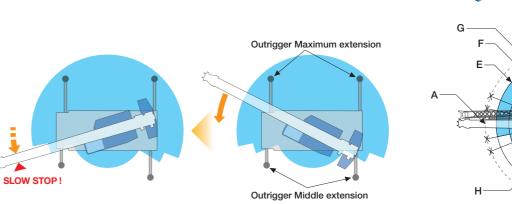

Moment load ratio

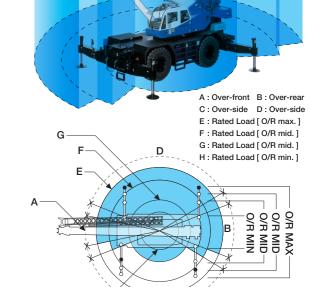

Working range limit

100% or more

wo-blocking

When operating the crane with the asymmetric outriggers extended, the AML-C detects the extension width of all of the Crane's outriggers (front, rear, left and right) to measure maximum work capacity in each area. When slewing the boom from the longer outrigger area to the shorter outrigger area, the AML-C detects the motion and displays the maximum capacity according to the extension width of each of the outriggers, and brings the motion to a slow stop before it reaches the maximum capacity. Therefore, even in the case of operator error, the AML-C's slow stop function will help to minimize any safety risk.

l de la companya de

Operator comfort

The crane cab provides improved livability and a more comfortable working environment.

Photo: GR-600EX

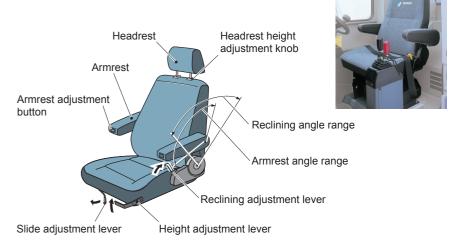

Air conditioner Hot-water heater and air conditioning.

The control levers are smooth and responsive to the operators touch.

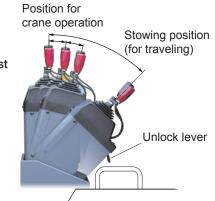

Seat adjustment

Multiple seat adjustment positions for ease of operation.

Adjustment of control lever stand

- The control lever stand has a 3-stage adjustment feature.
- Before you enter or exit the cab, or when you complete the crane operation, set the control lever stand on the left to the stowing position.
- The unlock lever is used by pulling to adjust for all positions of the control lever stand.

New carrier frame (GR-800EX, GR-600EX)

The new carrier frame design was developed and built so that its lightweight is compatible with its high rigidity to achieve an advanced level of performance. As a result, the rigidity was enhanced by as much as *35% which enables highly stabilized maneuverability for the new model of crane.

*Compared with our conventional crane models

CARRIER ENGINE TRANSMISSION STEERING	equipped with integral holding valve. Each outrigger beam and jack is controlled independently from cab. Max 7,300 mm, Mid 6,700 mm & 5,500 mm Min 2,700 mm, Float size (Diameter) 600 mm Rear engine, left-hand drive, driving axle 2-way selected type by manual switch. 4 x 2 front drive, 4 x 4 front and rear drive Model Mitsubishi 6M60-TL Type 4-cycle, turbo charged and after cooled, 6-cylinder, direct injection diesel. Piston displacement 7.54 liters Bore x stroke 118 mm x 115 mm Max. output 200 kW at 2,600 min ⁻¹ {rpm} Max. torque 785 N·m at 1,400 min ⁻¹ {rpm} Electronically controlled full automatic transmission. Hydraulic power steering. 4 steering modes available:	jack is controlled independently from cab. Max 7,300 mm, Mid 6,700 mm & 5,500 mm Min 2,700 mm, Float size (Diameter) 600 mm Rear engine, left-hand drive, driving axle 2-way selected type by manual switch. 4 x 2 front drive, 4 x 4 front and rear drive Model Mitsubishi 6M60-TL Type 4-cycle, turbo charged and after cooled, 6-cylinder, direct injection diesel. Piston displacement 7.54 liters Bore x stroke 118 mm x 115 mm Max. output 200 kW at 2,600 min ⁻¹ {rpm} Max. torque 785 N·m at 1,400 min ⁻¹ {rpm} Electronically controlled full automatic transmission. Hydraulic power steering.

MODEL	GR-300EX
MAXIMUM CAPACITY PERFORMANCE	30,000 kg at 3.0 m
Max. Traveling speed	50 km/h
Gradeability (tan θ)	78% (at stall), 57%*
	* Machine should be operated within limit of engine crackcase design. (30°: Cummins QSB6.7**)
WEIGHT	Crackcase design. (50 : Currining QSB0.7)
Gross vehicle mass	27,190 kg (incl. 30 ton hook block)
front axle rear axle	13,650 kg 13,540 kg
MIN. TURNING RADIUS	9.8 m (2-wheel steering), 5.8 m (4-wheel steering)
	(at center of extreme outer tire)
BOOM Fully retracted length	4-section full power telescoping boom.
Fully extended length	31.0 m
Extension speed	21.3 m in 91 s
Angle Elevation speed	0°–81° 20° to 60° in 22 s
JIB	2-staged jib with triple offset (tilt type).
	Single sheave at jib head.
Offset Length	5°, 25°, 45° 7.2 m and 12.8 m
MAIN WINCH	Variable speed type with grooved drum driven by
0	hydraulic axial piston motor.
Single line pull Single line speed	39.2 kN {4,000 kgf} 125 m/min. (at 4th layer)
Wire rope	16 mm x 170 m (Diameter x length)
AUXILIARY WINCH	Variable speed type with grooved drum driven by
Single line pull	hydraulic axial piston motor. 39.2 kN {4,000 kgf}
Single line pull Single line speed	125 m/min.(at 4th layer)
Wire rope	16 mm x 98 m (Diameter x length)
SLEWING Slewing speed	3.2 min ⁻¹ {rpm}
Tail slewing radius	3,330 mm
HYDRAULIC SYSTEM	Pumps 2 variable piston pumps for crane functions.
	Tandem gear pump for steering, slewing and optional equipment.
	Control valves
	Multiple valves actuated by pilot pressure
	with integral pressure relief valves. Reservoir 380 liters capacity. External sight level gauge
	Oil cooler Air cooled fan type.
TADANO Automatic	Following information is displayed:
Moment Limiter (Model: AML-C)	Control lever lockout function with audible and visual pre-warning Number of parts of line
(IVIOUEI. AIVIL-O)	Outrigger state indicator Slewing angle
	Boom angle / boom length / jib offset angle / jib length / load
	radius / rated lifting capacities / actual loads read out • Potential lifting height • Ratio of actual load moment to rated
	load moment indication • Permissible load
	Automatic speed reduction and slow stop function for boom
	elevation and slewing • Working condition register switch • Load radius / boom angle / tip height / slewing range preset
	function • External warning lamp • Tare function
	Main hydraulic oil pressure
	Main winch / auxiliarly winch select Drum rotation indicator (audible and visible type) main and
	auxiliary winch • On-rubber indicator
OUTRIGGERS	4 hydraulic, beam and jack outriggers. Vertical jack cylinders
	equipped with integral holding valve. Each outrigger beam and jack is controlled independently from cab.
Extension width	Max 6,300 mm, Mid 5,900 mm & 5,000mm
OADDIED	Min 2,200 mm, Float size (Diameter) 400 mm
CARRIER	Rear engine, left-hand drive, driving axle 2-way selected type by manual switch.
	4 x 2 front drive, 4 x 4 front and rear drive.
ENGINE	Model Cummins QSB6.7 EU) stage IIIA
	Type 4-cycle, turbo charged and after cooled, 6-cylinder, direct injection diesel.
	Piston displacement 6.70 liters
	Bore x stroke 107 mm x 124 mm
	Max. output 160 kW at 2,500 min ⁻¹ {rpm} Max. torque 843 N·m at 1,600 min ⁻¹ {rpm}
TRANSMISSION	Electronically controlled full automatic transmission.
STEERING	Hydraulic power steering.
	3 steering modes available: 2-wheel front, 4-wheel coordinated, 4-wheel crab
	<u> </u>
SUSPENSION	Semi-elliptic leaf springs with hydraulic lockout device.
TIRES	445/95 R 25 (OR), Single x 4
FUEL TANK CAPACITY	300 liters

*Some specifications are subject to change
