NOTES FOR RATED LIFTING CAPACITIES :
The mass of hook (90 kg), slings and all other similarly used load handling devices must be added to the mass of the load.
The above numerical values of total rated loads are based on crane strength only. The total rated loads based on stability may be lower than those in the above table depending on the loading conditions and the types of the chassis.

Hydraulic Oil Cooler (OPTION)
Cools down hydraulic oil temperature for safe operation of hydraulic components and their longer service life.
Saves costs of maintenance, repair, and part replacement.
Possible causes of danger: if seals, hoses or cylinders are damaged, bursting hoses can cause injury to operators.

CARGO
CRANE

TM-ZT1000H Series

THREE-POINT SUPPORT SYSTEM (Equalizer Crane Support)

The equalizer crane support system protects the chassis frame by evenly distributing the load applied to the frame during vehicle traveling to prevent excessive stress from concentrating at any one point.

FULL CIRCLE, CONTINUOUS SLEWING

360-degree FULL CIRCLE, continuous rotation for more efficient operations.

BIGGER HYDRAULIC TANK

A bigger size 90 L hydraulic tank is integrated with a crane frame for minimizing chassis modification.

STRONG AND WIDER OUTRIGGER & SAFETY LOCK

Strong, 5.2 m width and powerful outriggers with box structure jacks, an easy and safe lock system together with new universal float. The lock system is one of the advanced reliable TADANO standard safety systems.

OUTRIGGER LOCK PIN
(Both sides)

BIGGER UNIVERSAL OUTRIGGER FLOAT

The universal float moves 360 degrees to fit to any ground for better stability with less ground pressure due to larger sized floats.

ELECTROSTATIC PAINTING

Our high deposit and efficient electrostatic painting method, which maintains the external appearance fine and beautiful, prevents the machine from rusting, and provides uniform painting quality equally at every corner.

OPERATION LEVER

High performance and quick response operation levers are located at lower reachable positions for safe and efficient operation. No need to ride on the crane or stretch your arm. In addition, they are equipped with auto accelerator features. When the boom telescoping lever, winch lever, boom elevating lever, boom swing lever, or jack lever is operated, the accelerator is activated automatically.

STRONG PENTAGONAL BOOM

TADANO's traditional strong pentagonal boom is thoroughly designed and well proven for its quality, strength and smoothness, with a rigid and fine-tuned telescoping boom providing comfortable crane operation.

TADANO's traditional strong pentagonal boom is thoroughly designed and well proven for its quality, strength and smoothness,

AUTOMATIC SLEWING LOCK SYSTEM

The boom is locked securely to prevent accidental boom slewing out during driving.

HOOK IN

TADANO original HOOK IN system is equipped as standard and enhances work efficiency. First 10 t class with the HOOK IN system in the crane world.

ANTI-TWO-BLOCK FUNCTION

This function stops crane operation (hoisting up, boom elevation, and boom extension) when the hook block touches the weight, to prevent the hook block from hitting the boom head, and warns the operator with the buzzer.

CABLE FOLLOWER

The cable follower prevents disorderly cable (wire rope) winding by always pressing the cable onto the winch drum and puts the wire rope at a right position.

WINCH

An upgraded stronger winch motor provides a stable lifting operation.

* Boom deflection, and subsequent radius and boom angle change must be accounted for when applying load to hook.

WORKING RANGE

TM-ZT1004H

TM-ZT1005H

NOTES FOR TECHNICAL SPECIFICATIONS:

Operating speeds of the crane are guaranteed under the condition that the pump delivery is 60 L/min.

NOTES FOR WORKING RANGE:

Boom deflection, and subsequent radius and boom angle change must be accounted for when applying load to hook. The underground working range is based on the 4-parts of line setting.

Note: The picture shows 8 part lines for 10 ton lifting condition. 8 part line is necessary for 10 ton load lifting only. Normally use 4 part lines for Maximum 5 ton lifting.
